

Advanced

To add auto pauses or output functions to any track, first highlight the desired track on the main screen in the root directory (left side), click the advanced button below the root directory. The Advanced screen will open with the track name at the top as shown below.

Enter the times (in seconds) for pauses or outputs in the boxes. Click the save settings button. Any playlist that you insert this file into will have those same settings. If you want different settings for the same file in just one playlist (rare) ... then open the desired playlist, highlight the song in the playlist (right side) and click the advanced button below the playlist (on right). Insert times, save settings, then you must save the playlist immediately.

Each track can have up to 15 time entries depending on the the length of the file name. If too many entries are made an error will appear upon saving. If this happens, click Clear then Cancel. To allow more room for settings you can shorten your filenames to 6-8 characters.

You may also decide how you would like the remote fade to act in this screen by selecting the appropriate button as shown at the right.

Advanced Settings Form

**Stethoscope.mp3** Track Volume

**Auto Pause**

**Remote Fade** ☒ Fade & Cue Next ☐ Fade - Cue - Play Next ☐ No Fade - Cue & Play Next
